                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of the coding region of the human gene (see also AAH26494) encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82806). The gene was isolated from a genomic DNA library using LBP-2 CDNA as probe. The LBP-2 protein predicted from the present sequence differs from that the contains an additional 32 mains each as ABB2803) in that it contains an additional 32 mains ocids at its N-terminus (the cDNA is a 5 truncation). LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed.

Characterical compositions, are also claimed.

The Open reading frame spans 5 exons. Human LBP-2 cnucleic acids are among claimed polynucleotides of the Tivention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Ale ragments and analogues cof them, as well as expression vectors, cells and methods of producing the LBPs. Methods for evaluating an agent for use in abnormality in structure or metabolism of LBP and methods of treating atherosclerosis, and methods for evaluating an agent for use in abnormality in structure or metabolism of LBP sure claimed. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            168 GIGGCCGTCTGCCAAGGCGAGGTCGAGGCAGGCTCAGGGACCTGCAGTGCTGGAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to an immediate early herpes-simplex-virus type 2 (HSV-2) infected cell protein 4 (ICP4) recognised by human cytotoxic T cells. HSV-2 ICP4 protein is recognised by cytotoxic T-lymphocyte (CTL) cells in humans and is used in vaccines for therapeutically or prophylactically treating HSV infections. Pharmaceutical compositions of HSV-2 ICP4 protein may be used to treat patients suffering from HSV infections, to prevent or decrease recurrent herpes disease, frequency, severity and duration of episodes. The present sequence represents HSV-2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a composition comprising an expression vector bound to an aggregated protein-polycationic polymer conjugate or buspension. The expression vector contains a promoter polynucleotide sequence operatively linked to a polynucleotide sequence encoding an antigen which is a fragment of a gene or genome associated with an infectious disease, cancer and autoimmune disease such as rheumatoid arthritis, vasculitis, and multiple sclerosis, pathogenic genomes consisting of bacterium, fungus, protozoa and virus such as human immunodeficiency virus (HIV), herpes simplex virus (HSV), hepatitis C virus (HCV), influenza and respiratory syncytial virus (RSV), and optionally comprising a nucleotide sequence encoding a cytokine (or a cytokine expression vector); is useful for inducing an immune response (systemic and/or mucosal) in an organism. The cytokine expression vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            compaired not oral delivery of vaccines, comprises expression vector containing antigenic genomic sequence, bound to aggregated protein-polycationic polymer conjugate or suspension

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         129921 GTCGCGCACGACGACCGCAGCTCGCGCAGCCCAGGCGCAGGCGGGGCGCGCGTCGGCGTGCGG 129980
contains a sequence for granulocyte macrophage-colony stimulating factor (GM-CSF) or interleukin-12 (IL-12). The polynucleotide sequences encoding the antigen and the cytokine are under transcriptional control of same or different promoter polynucleotide sequences. The expression vector, as a DNA vaccine is useful for treating a condition in an organism. The present sequence is human herpesvirus 2 complete DNA genome related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              187

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        contains a sequence for granulocyte macrophage-colony stimulating factor (GM-CSF) or interleukin-12 (IL-12). The polynucleotide sequences encoding the antigen and the cytokine are under transcriptional control of same or different promoter polynucleotide sequences. The expression vector, as a DNA vaccine is useful for transfing a condition in an organism. The present sequence is human herpesvirus 2 complete DNA genome related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GGTCGAGCGGCAGAGGCTCAGGACCTGCAGTGCTGGCAGGAGGTCCAGGAGAGCCCGCT 247

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GCCGCCGCTGGAGAAAGGCTGGTGGCCATGGGGGCGCCAGCAGCAGCCGCCGCCGCCAGGG 487
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a composition comprising an expression vector bound to an aggregated protein-polycationic polymer conjugate or buspension. The expression vector contains a promoter polynucleotide sequence expression vector contains a promoter polynucleotide sequence operatively linked to a polynucleotide sequence encoding an antigen which is a fragment of a gene or genome associated with an infectious disease, cancer and autoimmune disease such as rheumatoid arthritis, vasculitis, and multiple sclerosis, pathogenic genomes consisting of bacterium, fungus, protozoa and virus such as human immunodeficiency virus (HIV), herpes simplex virus (HSV), hepatitis C virus (HCV), infihenza and respiratory syncytial virus (RSV), and optionally comprising a nucleotide sequence encoding a cytokine (or a cytokine expression vector), is useful for inducing an immune response of systemic and/or mucosal) in an organism. The cytokine expression vector

The invertion relates to an isolated ramoplanin blosyntheeit pathway polypeptide aelected from a polypeptide of open reading frames (ORF) (CC 1-32. The isolated polypeptides are useful for chemically modifying a campolanin biosynthesis gene cluster, by contacting the biological molecule that is a substrate for a polypeptide encoded by a ramoplanin biosynthesis gene cluster, by contacting the biological molecule. The method comprises contacting the biological molecule. The method comprises contacting the biological molecule. The method comprises contacting the biological molecule. The method comprises contacting the biological molecule with at least two different polypeptides encoded by campolanin ORFs 1-31. The polypeptides are useful for directing the biological antibiotic ramoplanin in microorganisms. An isolated comprising the ORFs is useful as a substrate for concomplating nucleic acid sequence is useful for generating derivatives of cramoplanin, for improving production or for producing variants of cher antibiotics of the peptide class. The isolated polypeptides are useful controporation of Thr into a peptide antibiotic precursor, for modifying catcher and/or enhancing fatty acid structure and/or enhancing secretion of campolanin or its variants and derivatives, for chancing upcake of the peptide antibiotic, for enhancing production of a ramoplanin products or its variants and derivatives, for chancing preduction of cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or derivatives, to cramoplanin products or its variants or d 243 ccecriceacecerecceccaegricorceaegacaecraace--eceeceeceece 183 GGCGAGGTCGAGCGCGAGAGGCTCAGGGACCTGCAGTGCTGGCAGGAGGTCCAGAGAGC Novel isolated ramoplanin biosynthetic pathway polypeptide useful for chemically modifying biological molecule that is a substrate for a polypeptide encoded by a ramoplanin biosynthesis gene cluster -P-PSDB; AA022146, AA022147, AA022148, AA022149, AA022150, AA022151, AA022152, AA022153, AA022153, AA022154, AA022155, AA022156, AA022156, AA022158, AA022165, AA022165, AA022165, AA022165, AA022165, AA022165, AA022165, AA022167, AA022167, AA022167, AA022167, AA022167, AA022167, AA022167, AA022167, AA022167, AA022167, AA022172, AA022172, AA022173 Gaps The invention relates to an isolated ramoplanin biosynthetic pathway 5; Sequence 88421 BP; 10639 A; 32391 C; 32663 G; 12728 T; 0 other; Query Match 6.6%; Score 63; DB 24; Length 88421; Best Local Similarity 54.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cover expression of transcription factor Brn-3a can protect neuronal cells from apoptosis. Brn-3a also specifically activates expression of the BC1-2 gene in neuronal cells and this activates expression of the BC1-2 gene. Both the anti-apoptopic effect of Brn-3a and its ability to activate expression of BC1-2 are mediated by the N-terminal Commain of Brn-3a. Members of the BC1-2 family perform critical roles in the regulation of Selective apoptosis during development of the nervous system. The stimulation of BC1-2 expression by Brn-3a in a nervous system. The stimulation of BC1-2 expression by Brn-3a in a neuron specific manner and consequent protection of neuronal come aspects of neuron apoptosis suggests that Brn-3a may co-ordinate some aspects of neuronal reorganisation during development or following injury. The clavation of Earth as expression by either pharmacological means compositions comprising one other therapeutic polypeptide e.g. neurotrophic factors, nerve growth factor (NGF), ciliary neurotrophic factor (CNTF), brain-derived neurotrophic factor (BNTF), and NT-4/5) or gene therapy may represent a neurotropal cell death and/or lack of nerve regeneration, especially
                                                         Brn-3a, Bcl-2, neurons, neuronal cells, apoptosis, cell death, CNS, PNS, central nervous system, parasympathetic nervous system, development, injury, neurotrophic factor; nerve growth factor; NGF, ciliary neurotrophic factor, CNTF, brain-derived neurotrophic factor, BNTF, neurodegenerative disease; familial dysautonomia, infantile muscular dystrophy; Parkinson's disease; Alzheimer's disease; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polypeptide comprising transcription factor Brn-3a, or its derivative - useful for treating nervous system diseases, preventing cellular apoptosis and increasing nerve regeneration following neuronal damage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            neuronal cell death and/or lack of nerve regeneration, especially neurodegenerative diseases such as familial dysautonomia and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             infantile muscular dystrophy, and Parkinson's and Alzheimer's

A product that binds, causes a decrease in intracellular levels of or inhibits the activity of Brn-3a useful for treating, prevention or diagnosis of cervical cancer caused by human papilloma virus (HPV) is claimed. Expression of HPV proteins is generally dependent on the presence of Brn-3a in the cell. Methods of identifying Brn-3a binding agents or agents which inhibit Brn-3a expression are claimed. Nude mice were injected with Sida cells containing a single integrated HPV16-genome were transformed with a Brn-3a antisense construct and with the empty expression vector as control and tumours assessed at regular intervals. Results showed that after 30 days there was no or very little tumour
                                                                                                                                                                                                                                                                                                              growth in mice transformed with Brn-3a antisense construct as compared
                                                                                                                                                                                                                                                                                                                                             the control

directed against at least 2 mRNAs selected from target genes, coding and directed against at least 2 mRNAs selected from target genes, coding and non-coding regions of RNAs corresponding to target genes, genee, controlled and and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one compared from sequences ArX55272-74. These multiple target may be derived from sequences ArX55272-74. These multiple target oligonucleotides (specifically AAX5580-271) can be used for the conditions are those associated with impaired respiration and conditions are those associated with impaired respiration and inflammation, allergic rhinitis, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, pulmonary vasoconstriction, including lung diseases, pulmonary vasoconstriction, emphysema, chronic obstructive pulmonary diseases (COPD), and cancers such as leukemias, increase compared and concers such as leukemias, increase. 110548 GGGGNNHNNNSGGCGGGGGGGGCGCGCCNHNNNSGGCGGGCGGCGCGGGGCCCNNHNNNS 110489 110668 CNNHNNNSGGCGGGCGCGNNHNNNSGGCGGCGCGCGCNNHNNNSGGCGGGCGCGCGCNN 110609 110488 GGCGGGCGCGCGGGGGCCCNNHNNNSGCGGGGGCCCCNNHNNNSGGCGCGGGGCCCCNN 110429 110428 HNNNSCGGCGGGGCCCCNNHNNNSGCGGCGCGGGGCCCCNNHNNNSGCGGGGGGGGG 110369 416 lymphomas, carcinomas e.g. colon cancer, breast cancer, lung cancer, pancreatic cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic metastases, as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polynucleotide library used to determine cancerous states of mammalian

The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of prognosis of diseases and disorders (e.g. identification of pre-metastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-negative breast cancer, oestrogen receptor-negative breast cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GCGCCGGGCTCCTGGGCGCTCCGCCACCTCACCCGCATATGCACAGCCTGGGCCACC 771
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SIAX DP2-64 (Oct-T1) gene. The protein is a tumour rejection antigen precursor (TRAP). The specification describes the treatment of disorders which characterised by expression of a leukaemia-associated nucleic acid such as TRH. The products are used for in vivo or in vitro screening for leukaemia, lymphoma or other cancers by usual hybridisation/amplification or immunoassay methods. TRAPs, when processed to antigens or complexed with High (human lymphocyte antigen) molecules, or nucleic acid encoding them, are useful in vaccines for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  refectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedesectedes

Patent No. 595549

GENERAL INPORMATION:
APPLICANT: KIHARA, MAKOTO
APPLICANT: KUHARA, HISOO
APPLICANT: ITO, KAZUTOGHI
TITLE OF INVENTION: EXPRESSION REGULATORY DNA,
TITLE OF INVENTION: EXPRESSION CASSETTE, EXPRESSION VECTOR AND TRANSGENIC
TITLE OF INVENTION: PLANT
NUMBER OF SEQUENCES: 8
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADDRESSEE: OBLON, SPIVAK, MCCLELLAND, MAIER & NEUSTADT, ADDRESSEE: P.C.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2, An Sequence 1, An Sequence 4, Appl Sequence 14411

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence Sequence S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
